

## **Alcohol Testing Equipment Manufacturer Lifeloc Technologies Announces Innovative New Sequence™ Software to Simplify Alcohol Screening for Law Enforcement Use**

*As a leading alcohol testing equipment manufacturer, Lifeloc provides law enforcement administrators more control and consistency with Sequence software.*

Wheat Ridge, CO ([PRWeb](#)) June 21, 2007 -- Lifeloc Technologies' ([www.lifeloc.com](http://www.lifeloc.com)) new Sequence™ software available on its popular FC20 model portable breathalyzer is designed for roadside DUI enforcement, administrative enforcement for underage drinking and other applications that require verified test data. The sophisticated, software-driven system automatically walks an officer through approved testing procedures, helping ensure that the essential steps and proper timing are followed, and all necessary data is automatically recorded in digital memory.

Sequence™ software was developed in collaboration with police authorities, and is patterned after Lifeloc's highly successful and industry-leading EasyMode™ System which has widespread use in the transportation and workplace alcohol testing arenas.

The Sequence™ software protocol is flexible, made possible by Lifeloc's patented digital software platform. It can be customized at the factory to fit individual agencies' testing requirements, which vary significantly by locality according to state and local regulations. Sequence easily leads officers through an agency's mandated, step-by-step protocol using simple, menu-driven prompts in plain-English, making testing faster, easier and much less prone to procedural errors.

Once testing is completed, test details and calibration data are captured in memory within the FC20. No peripheral equipment is required, and the device itself is no larger than a package of cigarettes. Results can be printed directly to a portable printer or downloaded to a computer, either on-scene or later.

Other unique FC20 features include electronic calibration reminder and lockout, with Lifeloc's exclusive password protection. This feature allows administrators to control their alcohol testing program and help ensure testing credibility and consistency.
